

Project Memo Database Application and System Final Project

Matthew Levine

Members:

For the final project I will be working by myself

Datasets:

Originally I was planning on using datasets revolving around COVID however my dataset was pretty normalized and I did not really know what I wanted to have it interact with. I decided to switch to work with colleges, I have one dataset about college acceptances and the type of people accepted, another with tuition cost which I will be using for the sql. For the nosql I will be using a dataset on NCAA basketball and another for College Football.

Licenses:

The only license I saw was a MIT License which seems like it wouldn't be an issue.
